ACCLARENT AERA™ EUSTACHIAN TUBE BALLOON

GO BEYOND SYMPTOMS TO THE SOURCE

The first balloon dilation intervention indicated for persistent Eustachian Tube Dysfunction (ETD) in the United States

Designed to relieve symptoms of persistent ETD

ETD is a condition caused by the inadequate opening of the Eustachian tubes, and may be causing your patients to experience chronic ear pressure, pain, and/or clogged or muffled sensations.1 Adult prevalence of ETD is estimated to be between 0.9% and 5.0%.2,3

ACCLARENT AERA™ is the only balloon indicated for persistent ETD in the United States

1 Designed specifically for the Eustachian tube anatomy

2 Offers the flexibility to adapt to the s-shaped curve of the Eustachian tube

3 Preserves natural anatomy with minimally invasive, transnasal access

Safe by design, the bulb tip enhances safety by limiting balloon catheter travel to the isthmus.
**Proven safety and efficacy**

ACCLARENT AERA™ is backed by the only prospective, multicenter, randomized clinical trial to demonstrate¹:
